

JULIUS CESSAR LAPUGOT

Senior Java Software Engineer

Valenzuela City, Philippines | juliusclapugot@gmail.com | [linkedin.com/in/jlapugot](https://www.linkedin.com/in/jlapugot) | github.com/builtbyjuls

PROFESSIONAL SUMMARY

Senior Java software engineer with nearly 10 years of experience delivering mission-critical enterprise systems across energy, banking, HR, and warehouse operations. Deep Java and Spring Boot backend expertise with working proficiency in Angular and React, plus system integration, high-volume data processing, database design and tuning, and technical mentoring.

PROFESSIONAL EXPERIENCE

Exist Software Labs, Inc. | Software Engineer to Senior Java Software Engineer

Apr 2016 - Oct 2025

Senior Java Software Engineer, 2020-2025 | Software Engineer, 2016-2019

- Owned the end-to-end implementation of a high-volume energy-market contract processing module from requirements, serving hundreds of market participants. Processed multi-thousand-row monthly time-series CSV uploads containing five-minute interval data across multiple contract combinations. Replaced generic failures with exact row and validation rule details shown after processing, so participants could identify and correct errors directly instead of spending minutes investigating each failed file.
- Independently delivered a government permitting and energy-market registration API after initial scaffolding, including authentication, field mapping for dozens of required documents, validation, duplicate prevention, error handling, and audit logging.
- Improved maintainability and workflows across participant registration, contracts, market trading nodes, and reports in a large shared energy-market codebase; contributed additional participant and contract features across related market platforms.
- Served as primary senior engineer for an enterprise HR and payroll platform and implemented RabbitMQ-based asynchronous employee loan synchronization with field-level validation across internal systems.
- Delivered a secure messaging API end-to-end for a Philippine commercial bank by integrating established platform capabilities for customer conversations, attachments, notifications, and compliance logging.
- Implemented energy-contract billing calculations and invoice generation; maintained inventory functionality for an international warehouse-management platform; and built integration tests for a core banking trade-finance platform using JUnit, Mockito, and Testcontainers.
- Mentored approximately 10 junior engineers through onboarding, task breakdown, pair programming, code reviews, and design guidance.

TECHNICAL SKILLS

Backend: Java 8/11/17/21, Spring Boot, REST APIs, OpenAPI/Swagger, microservices, system design

Frontend: Angular and React (working proficiency)

Data and messaging: PostgreSQL, MariaDB, SQL Server, Redis, RabbitMQ, schema design, complex SQL, query tuning

Testing and delivery: JUnit, Mockito, Testcontainers, Jenkins, CI/CD, Maven, Gradle, Git, GitHub, GitLab

Platforms and practices: Docker, Kubernetes (working proficiency); AWS, GCP, Azure (basic); Agile/Scrum, Jira

EDUCATION

Bachelor of Science in Information Technology | Pamantasan ng Lungsod ng Valenzuela | 2016
